

Latex Dev Container

Develop LaTeX and Python in VS Code

L^AT_EX

Example of inserting Python code into LaTeX document:

```
1  import numpy as np
2
3
4  def hello_world():
5      # Create a numpy array with the ASCII values of 'Hello, World!'
6      hello_world_arr = np.array(
7          [72, 101, 108, 108, 111, 44, 32, 87, 111, 114, 108, 100, 33]
8      )
9
10     # Convert the ASCII values to characters and join them into a string
11     hello_world_str = "".join(chr(i) for i in hello_world_arr)
12
13     print(hello_world_str)
14
15
16 if __name__ == "__main__":
17     hello_world()
```
