Latex Dev Container Develop LaTeX and Python in VS Code

Example of inserting Python code into LaTeX document:

```
import numpy as np
2
   def hello_world():
        # Create a numpy array with the ASCII values of 'Hello, World!'
5
       hello_world_arr = np.array(
6
            [72, 101, 108, 108, 111, 44, 32, 87, 111, 114, 108, 100, 33]
7
       # Convert the ASCII values to characters and join them into a string
10
       hello_world_str = "".join(chr(i) for i in hello_world_arr)
11
12
       print(hello_world_str)
13
15
   if __name__ == "__main__":
       hello_world()
17
```
